

Carlos Horacio Olivares Cordero

carlos.horacio.olivares@gmail.com | +52 55-5506-3113

Experienced data professional with over 7 years of Python development experience, specializing in process automation, ETL, and data visualization. Advanced skills in PowerBI, SQL, and data architecture, with a strong background in Finance and Economics.

Experience

Sr. Data Engineer

Aug 2024 – present day

Capgemini - Insurance Client

- Designed and implemented a complex Python API connection for automated data extraction, delivering the fully functional solution months ahead of the original project timeline.
- Identified and resolved inefficiencies in financial and control reporting processes by developing Python automation solutions using openpyxl, leading to significant time savings and optimized resource management
- Developed and implemented an automated data pipeline to Snowflake, establishing a single source of truth that enabled creation of multiple SQL-driven reporting tables, eliminating manual errors and streamlining the reporting process

Sr. Data Analyst & Process Automation Consultant

Nov 2023 – Jun 2024

KT&I Konstruktion Technologie & Innovation

- Developed and implemented multiple BI dashboard reports using PowerBI, providing real-time insights into project progress, financial performance, and resource allocation.
- Designed and optimized ETL processes using Python and SQL, improving data flow and accuracy for critical business metrics.
- Created custom software solutions using Python and SQL to address specific challenges in the construction industry.

Sr. Strategy & Operations Manager

Aug 2022 – Oct 2023

Nuvocargo

- Architected and implemented end-to-end ETL pipelines using Python and SQL, optimizing data workflows that reduced manual processing time by streamlining critical business operations.
- Designed and deployed interactive business intelligence dashboards across multiple platforms (Google Data Studio, Looker, Power BI), enabling real-time monitoring of critical KPIs and facilitating data-driven strategic decisions.
- Engineered scalable web scraping solutions using Python libraries to automatically extract, transform, and integrate data from diverse sources, powering dynamic dashboards and automated reporting systems that drove business insights

Financial Associate

Nov 2020 – Jul 2022

Producepay

- Engineered Python-based automation solutions for complex financial models and reports using pandas and openpyxl, reducing manual processing time by creating user-friendly interfaces for non-technical stakeholders
- Developed robust data extraction pipelines using BeautifulSoup and Selenium, transforming unstructured web data into actionable financial insights through automated reporting workflows
- Spearheaded the development and automation of comprehensive Financial and Operational KPI dashboards, implementing SQL-driven data pipelines that provided real-time metrics visibility across departments, enabling data-driven decision making

Senior Financial Consultant

Feb 2018 – Oct 2020

FTI Consulting

- Led development of comprehensive financial turnaround strategies for Fortune 500 clients across multiple industries (construction, airlines, retail, real estate, banking), leveraging advanced analytics to identify operational inefficiencies and growth opportunities
- Engineered sophisticated financial modeling frameworks using Python and Excel for scenario analysis, sensitivity testing, and cash flow projections, enabling data-driven forecasting and risk assessment for strategic decision-making
- Spearheaded data analytics initiatives that transformed raw financial data into actionable insights, delivering strategic recommendations that optimized working capital management and improved client profitability through quantitative analysis

Financial Consultant

Jan 2016 – Feb 2018

CitiBanamex

- Designed end-to-end credit analysis pipelines integrating diverse data sources and financial statements, streamlining loan evaluation processes through automated reporting workflows that enhanced decision-making capabilities
- Developed and implemented comprehensive data analytics solutions for customer behavior analysis, driving strategic insights that optimized product offerings and increased revenue through targeted financial services

Skills

- Built complex ETL pipelines and automated data workflows using Python (pandas, openpyxl) and SQL, optimizing business processes across multiple industries
- Engineered scalable web scraping solutions using BeautifulSoup and Selenium for automated data collection and transformation of unstructured data
- Developed and implemented end-to-end data pipelines to Snowflake, establishing single sources of truth that enabled creation of automated reporting systems
- Architected business intelligence dashboards using Power BI, Google Data Studio, and Looker, providing real-time visibility into critical business metrics
- Created sophisticated financial modeling frameworks using Python, enabling data-driven forecasting and quantitative analysis for strategic decision-making
- Demonstrated expertise in financial data analysis, developing KPI monitoring systems and automated reporting workflows that drove business insights
- Mastered multiple programming languages and tools: Python, SQL, JavaScript, ETL processes, and BI visualization platforms
- Implemented Git version control best practices for collaborative development, managing feature branches, code reviews, and deployment pipelines
- Led cross-functional teams in developing and implementing data-driven solutions that streamlined business operations
- Leveraged strong educational background (Master in Finance & Accounting) to bridge technical implementation with business requirements and financial analysis

Education

Instituto Tecnológico Autónomo de México (ITAM) Master in Accounting	2014 – 2016
Instituto Tecnológico Autónomo de México (ITAM) Master in Finance	2013 – 2015
Instituto Tecnológico Autónomo de México (ITAM) Bachelor’s degree in Economics	2007 – 2012

Advanced Technical Certifications

CodeCademy - Comprehensive certification program focused on advanced software development and data engineering practices, including:	2018 - 2021
● Mastery of Python programming fundamentals and specialized libraries (pandas, numpy, selenium, beautiful soup) for data manipulation and analysis ● Advanced ETL pipeline development using industry-standard practices, implementing data warehouse solutions with Snowflake and advanced SQL ● Full-stack development expertise combining Python, JavaScript, and SQL for building scalable data applications ● Version control mastery using Git, including branching strategies, collaborative development, and CI/CD pipeline integration ● Development of automated web scraping solutions and data collection frameworks for business intelligence	

Languages & Communication

- Spanish: Native proficiency
- English: Professional business fluency (C2 Level)
- German: Professional working proficiency (C1 Level)
